

How to create a Reverse DNS (PTR) record

1. Log in to [VPS Control Panel](#)

Access credentials are provided in the "Your VPS has been deployed" e-mail, and can also be accessed in the "Login details" section of your server management page.

2. Select the Network tab on configuration bar and click Edit next to the appropriate IP address
3. Enter your domain name in pop-up window and press "Update"
4. Done!

Don't forget to set a matching "A" record in your domain name settings prior to creating a PTR record, otherwise you will receive an error
