

# How to mount ISO to Dedicated server

1. Login into DCImanager ( [Guide how to login into DCImanager](#) )
2. Open **"Servers"** tab and select server
3. Click to **"Open Console"**

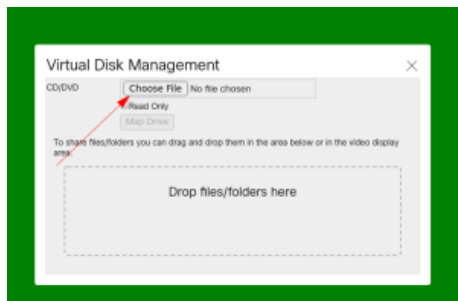

4. Click on **"Virtual Media"** to **"Active Virtual devices"**

5. Click on **"Virtual Media"** second time and choose **"CD/DVD"**

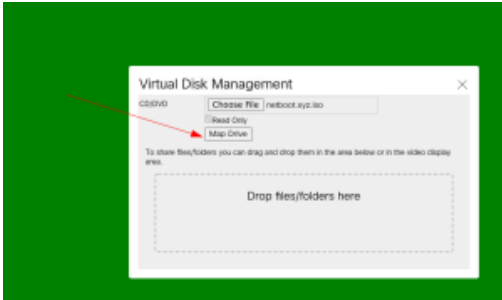

6. Click on **"Choose File"** and select your ISO file

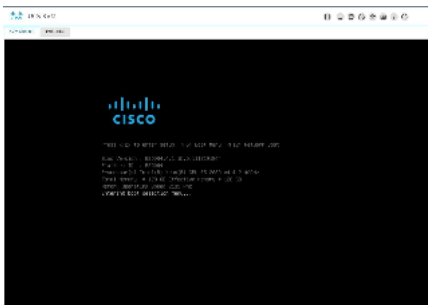

7. Click to **"Map Drive"**

8. Click on **"Server Actions"** and select **"Boot Server"** or **"Reset"**

9. After some seconds you will see Cisco logo and need to press **"F6"** multiple times until **boot device selection menu** will be opened

10. Navigate with arrows and choose **"Cisco vKVM-Mapped vDVD1.22"**

11. Image started loading ..
12. OS installation should start after all steps finished successfully
13. Network profile should be configured manually after installation.
